

# Hand disinfection technique

---

Efficient protection against bacteria, mycobacteria, yeasts and viruses: HIV, HBV, HCV, Ebola, influenza. Extended activity time: up to 3 hours.

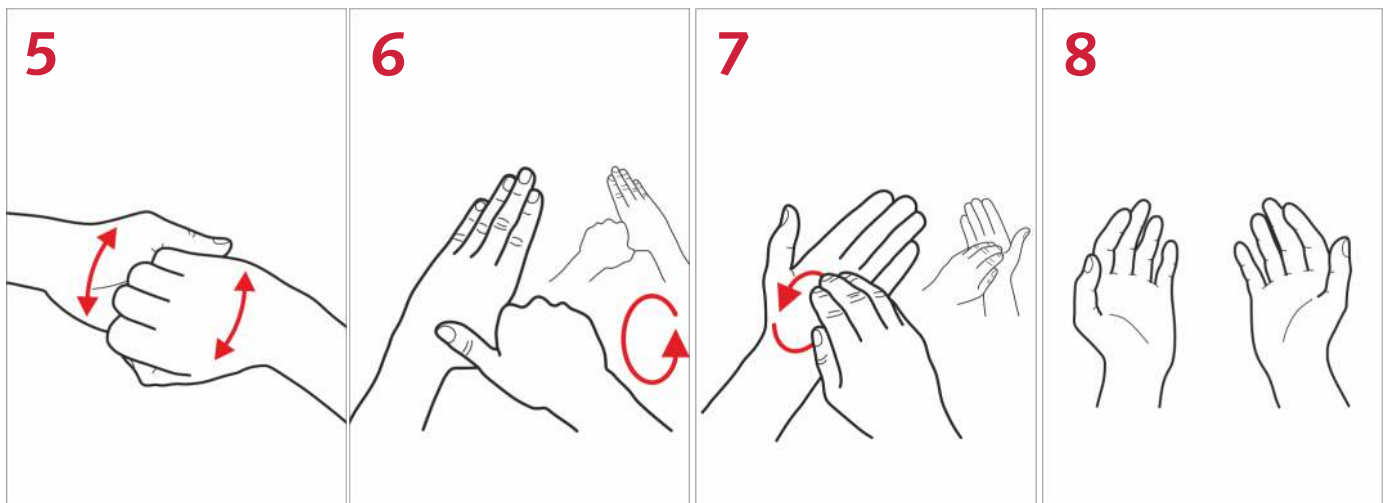

1  
Take an appropriate amount of the antiseptic product Velodes® Soft.

2  
Rub one palm against the other palm. Each stage involves five movements in both directions.

3  
Rub the dorsal part of one hand with the palm of the other hand and change hands.

4  
Rub palm to palm with interlaced spread fingers.

5  
Rub the backs of closed fingers of one hand against the bent fingers of the other hand and change hands.

6  
Take your right thumb with your left hand and perform rotational movements around the thumb and change hands.

7  
Rub the fingertips of the right hand on the left palm with circular movements and change hands.

8  
After drying hands are disinfected.
